More about the UCI Designing Next Generation Solutions with Generative AI course

Over 70 professionals completed the recent **Designing Next Generation Solutions with Generative AI** course, which was run in conjunction with the University of California – Irvine (UCI). It included six virtual lectures by UCI faculty members, six office hour sessions, approximately 10 hours of recorded videos, and Office Hours. Each KPMG professional invested up to 50 hours of their time, received up to 51 CPEs, and a university certificate of completion.

Cross-functional teams across KPMG's Service Networks submitted thought-provoking final Capstone projects, leveraging data to recommend solutions practical for our firm and clients alike. As teams worked on the final projects, they recognized the skill-mix needed and became proficient in understanding the use of Generative AI to implement solutions.

Several of the final projects are working to be implemented as solution assets. Additionally, the firm is leveraging the work and insights generated from the course to help solve complex problems.

Learn more about the course and register here! The firm offers University Courses focused in Generative AI and Data Science.
